Project Summary:

Group project 2 is a Jeopardy web app that allows users to compete against each other in a computer science trivia battle with a twist. In this game, users take turns picking answers from the board and must respond with the proper question that results in said answer. The goal is to amass the most cash before all questions run out! Contestants take turns choosing “questions” of different values from various subject categories revolving around various topics in computer science, ranging from web dev, to computer architecture, to machine learning. Once a question is chosen and displayed to the users, they have a certain amount of time to buzz in and guess correctly. The first contestant to guess correctly receives the value associated with that question; if a contestant submits an incorrect answer, the other contestants have the opportunity to buzz in and steal the money.

HEADER

Home Page Details:

In the homepage, users input their names and create their profile for the game.

Layouts:

- Heading:
 - “Jeopardy!” Title
- Body
 - Divided into 3 columns
 - First column:
 - Contains User profiles, User info, and settings buttons.
 - Second Column:
 - Contains the animated host, Timer display, and confirm answer button.
 - Third Column:
 - Contains the Jeopardy board and answer area; Takes up the bulk of the page

Page Details:

- Home Page -
 - Allows users to set up number of players and player profiles
 - Sends a form including player profiles to the main page
- Main Page -
 - Game Board
- Settings
 - Menu that allows users to adjust various settings
- User Info
 - Displays user info

Functionality:

- Transitions, animations, and transformations will be implemented when a user selects a question card so that the question can be properly displayed.
- The home page sends a form including user info to the main page to be used in the game.

Transition Implementation Details:

- Question Cards will transition from displaying monetary value to the question itself

Transformation Implementation Details:

- Transformations will smoothly control card transitions.

Animations Implementation Details:

- The host will be animated to bring life to the board. Cards will be animated to “flip” when selected.

User Experience:

- A dynamic, animated, and competitive game environment brings Jeopardy to life on your very own device. Play the game you love to watch at home with your friends!

Test Cases:

- Conduct usability testing with a focus group to gather feedback on navigation and user interaction.
- Test the website's responsiveness on different devices and screen sizes.
- Approach to Refine Improvements:
- Incorporate user feedback to optimize the user interface and streamline the user experience.
- Iterate on design elements based on usability testing results to ensure intuitive navigation and clear information presentation.
- Explain - Proposed APIs if any

Statement:

We, the undersigned members of the group, acknowledge that we understand the conditions outlined in this proposal. We are committed to actively participating in the implementation of the group project from start to finish. We understand that individual grades may vary based on our contributions and performance, and we agree to present an important phase of the work collectively.

Signed proposal:

Name: Jesus Guerrero

Name: Naomi Douglas

Name: Carter Griffin

This proposal outlines our plan to develop an interactive website that leverages CSS to create captivating user interfaces. We believe that this project aligns with the objectives of the web development class and offers an opportunity to explore CSS transformations, transitions, and animations in a practical setting. We are excited about the potential of this project and look forward to bringing our ideas to life.
